This assignment is used to test online submission of assignments at Canvas (<https://salemstate.instructure.com/>) . You must submit/upload a file (doc, docx, or pdf) in which there is only ONE screenshot photo. The screenshot should include the following:

- (Part of) Your Java source code of program “HelloWorld.java” in notepad++;
- (Part of) The terminal/command-line where the commands (“javac HelloWorld.java” and “java HelloWorld”) and the output can be seen.
- (Your screenshot does not have to display all the contents of the notepad++/source-code and the whole terminal. But it must show the commands, output, and at least half of the source code. Try to arrange the windows for the screenshot. You may need to use “**paint**” program *to crop/cut out* the picture. Focus on the required parts of the photo, cut off the unnecessary one to make the **file size relatively small!**)
