

SYLLABUS

Spring, 2014

CSC 246 Information Visualization

4 cr. DII Q

Prerequisites: One Mathematics course chosen from MAT 108, MAT 110, MAT 120, and MAT 208 and above; plus CSC 201J, or equivalent programming experience and permission of Department Chairperson.

Instructor: Beifang Yi
email: byi@salemstate.edu

Office: MH 211A
Hours: M/W (12:30pm-3:00pm)
T/R (9:45am-10:45am)

Phone: (978) 542-7246
Web Site: <http://cs.salemstate.edu/~byi/>

| Section | Time | Room | Final Exam |
|-----------|-------------------|--------|---|
| 01 | T & R 8:00—9:45am | MH 209 | Monday, 5/12, 2:00-4:00pm , MH 209 |

Catalog description:

This course presents the basic science and techniques behind information visualization, introducing fundamental concepts concerning the use of color, image processing, computer graphics, and scientific visualization. The course describes the principles of visual perception, information data types, and visual encoding of data representations, and then focuses on the study, design, and development of visualization techniques for the analysis, comprehension, explanation, exploration, and manipulation of large collections of datasets. The latest visual representation methodologies and state-of-the-art visualization tools including programming language(s) and visualization libraries and toolkits will be applied in the course to help understand the subject and to design and generate visual interpretation of large amounts of complex data collected from diverse areas such as physics, chemistry, biomedical studies, meteorology, geospatial research, business, etc. Students will form teams to participate in group projects that emphasize interdisciplinary interaction and cooperation, in order to analyze and solve real world quantitative problems. Four lecture hours per week, plus additional project time outside of class.

Prerequisites: One Mathematics course chosen from MAT 108, MAT 110, MAT 120, and MAT 208 and above; plus CSC 201J, or equivalent programming experience and permission of Department Chairperson.

Goals:

The purpose of this course is to introduce basic concepts of scientific visualization and to apply the latest visualization techniques in the real world problems encountered in science, engineering, and business. The goals of this course are:

- CG01: to develop an appreciation for the latest development of information visualization;
- CG02: to understand the concepts of analyzing, manipulating, and presenting complex data in an intuitive form;
- CG03: to understand the visualization techniques of producing insightful visual contents;
- CG04: to give students experience in collecting, analyzing, processing, interpreting, and presenting data;
- CG05: to give students experience in applying visualization techniques and tools in real world quantitative problems.

Objectives:

Upon successful completion of the course, a student will have:

- CO01: demonstrated basic knowledge of human visual perception, cognitive issues, and color vision;
- CO02: demonstrated basic knowledge of computer graphics and image processing;
- CO03: described characteristics of datasets and experienced with real data in a broad view of the rich world of information visualization;
- CO04: demonstrated knowledge of and skills in collecting, analyzing, interpreting, and presenting data;
- CO05: compared information visualization to scientific visualization;

- CO06: described visualization methodologies and techniques used in the manipulation of complex data, i.e., in color encoding, encoding of values and relations, trees and networks, maps, higher-dimensional data, etc.
- CO07: demonstrated basic knowledge of volume rendering and scalar, vector tensor visualizations;
- CO08: applied visualization principles and techniques in projects (using visualization tools/API/library and/or one programming language) which are related with at least two different areas, for example, biomedical studies, geosciences, physics, chemistry, meteorology, business, ... and etc.

Course Topics:

A detailed topics list and a general course bibliography can be found on the Computer Science Department website at <http://cs.salemstate.edu/dept/index.php?page=184>. Select CSC 246 to access a PDF document.

Text (Required):

- **Visualizing Data: Exploring and Explaining Data with the Processing Environment**, by Ben Fry, O'Reilly Media, 2008 (ISBN: 978-0-59-641455-6)
- **Learning Processing: a Beginner's Guide to Programming Images, Animation, and Interaction**, by Daniel Shiffman, Morgan Kaufmann, 2008 (ISBN: 978-0-12-373602-4).

Required Material:

(Required) Thumb (flash) drive, 4 GB minimum or online storage (for saving your projects)

Software and Programming Languages:

- Processing 1.5 or above
- Python 2.6 or above
- R (programming language)
- Java, Javascript, HTML/CSS.

Cell phones:

Turn the ringer off, or, better yet, *turn the phone off*.

Lecture Attendance:

Class attendance is **STRONGLY recommended: there are a huge amount of topics to be covered in the class and their programming implementation with new programming languages to be practices in the class without separate lab offerings.** Lecture will start promptly at the scheduled time, so please make a serious effort to not be late; if you *have* to be late, please be discrete when entering the classroom. While class attendance does not *directly* affect your final grade, some of the material covered in class is not found (in the same form) in the text, so class attendance and notes are very important. Note that you are at all times responsible for materials and assignments discussed in class: if you miss a class, try to get lecture notes from a classmate and review them *before* the next lecture. We will use SSU's online course management system, Canvas (<https://salemstate.instructure.com/login>) to post assignments, and announcements regarding the course topics and progress. You will need to visit Canvas (with your SSU Navigator use-name and password) for the course activities. Canvas uses your **SSU-**

stored email box for the communication between you and the instructor and thus you **must use this email** address. Each student is responsible for completing all course requirements and for keeping up with all that goes on in the course (whether or not the student is present).

Final Grade:

Final grade will be determined using the following grading weights:

| | |
|---|-----|
| assignments (programming/small projects short-answer exercises, and readings) | 35% |
| midterm examination | 10% |
| final examination | 20% |
| semester project and presentation | 35% |

Attendance is not used to calculate the final grade: however, note that you are at all times responsible for assignments and materials presented in class.

The following table shows how the course work is assessed against the course objectives:

| | Exams | Assignments(short-answer questions, programming/small projects, and readings) | Semester Project and Presentation |
|------|-------|---|-----------------------------------|
| CO01 | ✓ | ✓ | |
| CO02 | ✓ | ✓ | ✓ |
| CO03 | ✓ | ✓ | ✓ |
| CO04 | ✓ | ✓ | ✓ |
| CO05 | ✓ | ✓ | |
| CO06 | ✓ | ✓ | |
| CO07 | ✓ | ✓ | |
| CO08 | ✓ | ✓ | ✓ |

Student-Instructor Communication:

Learning how to develop software is very much a **hands-on, experiential process** - the only way to be sure that you understand the material is to apply it by designing and writing programs. The nature of programming is such that it is relatively easy to "get stuck" on minor technical topics that can be difficult to recognize, particularly at early stages of this course - this can lead to a significant amount of what feels like wasted time. While the single most effective way to deal with these problems is to talk to the course instructor, that approach can be problematic if the class meets only once or twice a week and/or if the instructor's office hours conflict with students' obligations.

If you have any questions regarding course material, and *in particular if you are having problems with a programming project*, the most effective way to get assistance is to *discuss with the instructor (either in the class or outside the classroom)*.

Assignments (Lab Exercises/Programming Projects/Short-Answer Exercises):

Different exercises (including short-answer exercises, programming projects, small projects, reading assignments) will be assigned during the semester. Many exercises *will definitely focus on programming practices as a preparation for your final/semester project (see below)*. Submission requirements and mechanics will be stated on each exercise. In general, each exercise will have an assigned due date and time: the required material(s) are to be submitted no later than midnight of that date.

Please refer to Final Grade above for the grading weight of the assignments.

Each assignment may have different full score points, depending on the difficulty and the amount of the work of the exercises. There will be one or two extra assignments given in the semester and these extra assignments will be used as make-up assignments. Any assignment may be used as the extras. The average score for the overall assignments will be the total scores received for all the assignments divided by the total scores of the required assignments. Usually there will be about 1100-point assignment questions given in the whole semester and the required assignment total scores will be about 1000 points. You may **not** move the extra points to the final grade. For example, students A and B have completed 1050-point and 800-point assignments and their Semester Assignment Grades will be $1000/1000 * 35 = 35$ and $800/1000 * 35 = 28$ points respectively (suppose that the required assignment points is 1000).

In addition, there will be **0.5 awarding credit points** for each of the assignment if it is submitted on time (i.e., by its deadline). Your earned award points will be added to your semester overall grade. Canvas automatically records the submission time and you may submit your answers multiple times for an assignment. Assignments submitted on Canvas will be graded several days after (within one week of) the deadlines and the assignment grades will be posted on Canvas. If you submitted wrong solutions and would resubmit the correct ones again, the grades will be recalculated again based on the new submissions and their submission times. It is very important to do double-checking on your submissions (i.e., download your submissions and check them).

Readings will be assigned from the text on a regular basis: for the maximum benefit from reading, do the readings before the material is covered in class. Supplementary material will be distributed on a regular basis, and will be the primary focus of class discussions. Occasional worksheets and problems will be assigned.

Semester Project and Presentation:

There will be one semester project and the project result will be presented at the end of the semester. Students can choose any visualization related topics as their final/semester projects *upon the instructor's permission*. For this assignment, the following materials should be submitted by their indicated due dates respectively : (1) semester project proposal (a brief description of the project and what it to be done and what would be the expected results), (2) semester project progress report (of what has been done and what will be done and temporary results), and (3) semester project portfolio including a formal project write-up/report, programming code, all project documents/audios/videos, and presentation documents.

Semester project and presentation is a major portion of the course work and therefore a main portion of the course grade. Please start on the semester project from the very beginning of the semester. *Excellent work on the semester project will receive bonus credits*, which is usually earned through the (future) presentation of the semester in a conference, SSU undergraduate research symposium in May, and etc. Working on *a real world, practical problem* is strongly encouraged for your semester project.

Exams:

There will be two exams, a midterm (usually in week 8) examination and a *comprehensive* final examination. Check the above for examination grading weights and times.

Missed Tests:

Tests (exams and quizzes) may not be made up except for *documented emergency* situations. If a test must be made up, arrangements must be made with the instructor to take the test before it is discussed in class (usually within a week of the test being administered).

Due Dates/Time:

- **There will be a 5% penalty for each week an assignment (lab/project/short-answer exercise) is late**; penalties accrue at the due time of the assigned due date. Though technically you may still get credits for your late submissions, this will severely affect your course work ahead and particularly your final project. **Note again:** this course covers *so many* different topics with *various* implementation techniques. Your timely completion of the assignments is the most important factor for your success in this course.
- **No assignments (including semester project) will be accepted after the final examination.**

Study Groups:

While I strongly encourage study groups, for non-group assignments I require that each student hand in his/her answers in his/her own words - **if two answers come out exactly the same or highly similar, neither will receive credit and/or further actions will be taken** (such as reporting to the department and/or university). Given the nature of most of the projects, homework questions and writing assignments, it will be almost impossible for two people to come up with highly similar answers UNLESS they copy.

Academic Integrity:

Academic Integrity Policy and Regulations can be found in the University Catalog and on the University's website (http://catalog.salemstate.edu/content.php?catoid=13&navoid=1295#Academic_Integrity). The formal regulations are extensive and detailed - familiarize yourself with them if you have not previously done so. A concise summary of and direct quote from the regulations: "Materials (written or otherwise) submitted to fulfill academic requirements must represent a student's own efforts". *Submission of other's work as one's own without proper attribution is in direct violation of the University's Policy* and will be dealt with according to the University's formal Procedures.

"Salem State University is committed to providing equal access to the educational experience for all students in compliance with Section 504 of The Rehabilitation Act and The Americans with Disabilities Act and to providing all reasonable academic accommodations, aids and adjustments. Any student who has a documented disability requiring an accommodation, aid or adjustment should speak with the instructor immediately. Students with Disabilities who have not previously done so should provide documentation to and schedule an appointment with the Office for Students with Disabilities and obtain appropriate services."

In the event of a university declared critical emergency, Salem State University reserves the right to alter this course plan. Students should refer to <http://www.salemstate.edu> for further information and updates. The course attendance policy stays in effect until there is a university declared critical emergency. In the event of an emergency, please refer to the alternative educational plans for this course located at <http://cs.salemstate.edu/~byi/2014Spring/CSC246/emergency/index.html>. Students should review the plans and gather all required materials when an emergency is declared.

Please remember that if, for any reason, you decide to drop this course, you **must** do so officially through the Registrar's office. The last day to withdraw from a course this semester is **April 11th**.

Note: This syllabus represents the intended structure of the course for the semester. If changes are necessary, students will be notified in writing and via all regular class communication mechanisms (class discussion, emails, and/or the course homepage through the instructor's website at <http://cs.salemstate.edu/~byi/>).
