

SYLLABUS

Spring, 2019

CSC 115 Software Design and Programming II (formerly CS 202J)

4 credits, DII

Prerequisites: CSC110 or CSC 201J

Instructor: Beifang Yi
email: byi@salemstate.edu

Office: MH 211A
Hours: TR (1:30pm-3:30pm)
W (12:30pm-1:30pm)

Phone: (978) 542-7246
Web Site: <http://cs.salemstate.edu/~byi/>

Section	Time	Room	Final Exam
01	T & R 10:50am—12:05pm	MH 206	May 9, Thursday, 11:00am—1:00pm MH 206
L21	T & R 12:15pm—1:30pm	MH 210	

Catalog description:

This course extends the treatment of object-oriented methodologies, languages and tools begun in CSC201J. The emphasis is on the analysis of complex problems, particularly those involving multiple design alternatives, and the use of class libraries. Specific topics include inheritance, polymorphism, recursion, stream and file I/O, exceptions, and graphical interface programming. Style, documentation, solution robustness, and conformance with specifications are emphasized throughout. Three lecture hours and three hours of scheduled laboratory per week plus extensive programming work outside of class.

Prerequisite: CSC110 or 201J.

Course Goals:

The purpose of this course is to enhance and extend students' understanding of tools and techniques for object-oriented software development. Upon completion of the course, a student should be able to do the following:

- CG1: analyze a problem statement for completeness and clarity;
- CG2: use the methodology of object-oriented design to develop class diagrams (data descriptions and methods) for a problem solution;
- CG3: convert this solution into source code in the designated high-level programming language in accordance with a well-defined set of standard;
- CG4: debug and test the program;
- CG5: provide clear documentation for the result.

Course Objectives:

- CO01: gained a deeper understanding of object-oriented design methodology;
- CO02: learned to recognize situations in which multiple design alternatives are possible;
- CO03: learned to recognize and apply design patterns;
- CO04: learned and utilized techniques for validation and verification of programs;
- CO05: gained experience in judging the effectiveness and cost of a software design;
- CO06: gained experience in choosing among competing design alternatives;
- CO07: I gained experience in the use of the UML modeling language;
- CO08: extended their knowledge of an object-oriented programming language, including graphical user interfaces, event-driven programs, file-based input/output, and the use of libraries;
- CO09: produced full documentation for multiple completed projects, including formal class diagrams;
- CO10: participated in one or more group projects.

Course Topics:

A detailed topics list and a general course bibliography can be found on the Computer Science Department website at <http://cs.salemstate.edu/dept/index.php?page=184>. Select CSC 115 to access a PDF document.

Text:

(Required) Java How to Program: Early Objects, 11th Edition, by Deitel & Deitel. Prentice-Hall, 2018 (ISBN: 978-0-13-474335-6).

Required Material:

(Required) Thumb (flash) drive, 4 GB minimum or online storage.

Software:

(Required) J2SE 8.0 (or above) and NetBeans 8.0 (or above) (this is the only IDE that is installed on the lab machines). Free copies of the software that have been customized for the course can be downloaded in the Department labs. There are many IDEs for Java programming and you have the option of choosing anyone or none.

Cell phones:

Turn the ringer off, or, better yet, *turn the phone off*.

Lecture/Lab Attendance:

Class policy is that of the Registrar's office- see the University catalog for details. **Note** that *you are at all times responsible for materials and assignments discussed in class*. We will use SSU's online course management system, Canvas (<https://elearning.salemstate.edu/>) to post assignments, test grades, and announcements regarding the course topics and progress. You will need to visit Canvas (with your SSU Navigator use-name and password) for the course activities. Canvas uses your **SSU-stored email** for the communication between you and the instructor and thus you **must use this email address**. Each student is responsible for completing all course requirements and for keeping up with all that goes on in the course (whether or not the student is present).

Class attendance is strongly recommended. Some of the class hours will be used to review or present software tools, to discuss and investigate Java implementation details that time may not permit to be fully presented in the texts (for design and implementation drills, for programming exercises,) to assist with design and debugging problems that arise in longer lab / project exercises, to discuss and review important topics/questions regarding the tests, and to check/examine/grade the exercises and homework.

Student-Instructor Communication:

Learning how to develop software is very much a **hands-on, experiential process** - the only way to be sure that you understand the material is to apply it by designing and writing programs.

If you have any questions regarding course material, and *in particular if you are having problems with a programming assignment*, the most effective way to get assistance is to *discuss with the instructor (either in the class, in the lab, or outside the classroom)*.

Please note: Canvas is used for submission of the assignments/projects and also for grading of the submissions. If you offer/send your questions through Canvas-grading-submission features, they usually do **not** go to the instructor. If you have questions, ask in the class/lab or send emails to the instructor!

Final Grade:

Final grade will be determined using the following grading weights and formula:

	Grade-A	Grade-B
written assignments	10%	0%
programming assignments	50%	50%
midterm exam	10%	10%
final examination	30%	40%
final grade (overall)	Max(Grade-A, Grade-B)	

Two different grading formulae are used to calculate your semester overall final grade: *Grade-A* and *Grade-B* and your

final grade will be the larger of them. Note: it is **more difficult** to get same grade through **Grade-B** than through Grade-A; it is easier to get higher grade through Grade-A scheme.

Please note: the instructor will take attendance though attendance is not used to calculate the final grade; the attendance will be reported to the college as a required portion of your overall academic evaluation; however; you are at all times responsible for assignments and materials presented in class.

The following table shows how the course work is assessed against the course objectives:

	Quizzes	Assignments (including programming projects and lab exercises)	Exams
CO01	✓	✓	✓
CO02	✓	✓	✓
CO03	✓	✓	✓
CO04	✓	✓	✓
CO05	✓	✓	✓
CO06	✓	✓	✓
CO07	✓	✓	✓
CO08	✓	✓	✓
CO09		✓	
CO10		✓	

Written Assignments:

The questions of written assignments are designed to help understand the course topics, prepare for programming practices, and get ready for tests. And **more important:** many of test questions in both midterm and final examinations will be much like the some of the written assignment questions!

While the solutions for most of the written assignment questions are provided, you will need to present your answers—handwritten or typed. No screenshots of the provided solutions or answers in copy-paste formats will be accepted. You show your solutions to the instructor and **sign your names or initials** on the assignment-checking/grading forms by the deadlines.

Please note: to get full credits for each assignment, **you must sign your names/initials on the assignment-grading sheet** provided by the instructor. Should something unexpected or emergent happened that prevents you from showing your solutions and signing your names/initials on the grading-sheet on time, this is what is called “documented/emergency situation” –please see “Documented Emergency Situation” under Due Dates/Times below. Also note that the instructor will post the assignment grades regularly (usually within one week after the assignment’s due date) on Canvas and you are encouraged to check your assignment grades regularly.

Readings will be assigned from the text on a regular basis: for the maximum benefit from reading, do the readings before the material is covered in class, and you will find that some of written assignment questions are based on the reading of the text.

Programming Assignments:

A significant number of programming assignments/projects will be assigned during the semester. *Most of them will have pre-lab activities to be completed prior to the implementation of the assigned tasks.* They will definitely require **significant programming time outside of scheduled lab**. Programming assignments may have different full score points, depending on the difficulty and the amount of the work of the exercises.

Each programming assignment must be submitted at Canvas (<https://elearning.salemstate.edu/>) and **must be tested/examined/checked in the lab by the instructor for full credits** of the assignment.

Please note: to get **full credits** for each assignment, **you must (0) submit your solution (that is program source code for programming assignments) to Canvas by the deadline, (1) show your solution in the lab, (2) have the instructor test your code in the lab, (3) answer the questions provided by the instructor correctly during the test, (4) modify/update your code**

correctly as a solution for a programming question that is very similar to the one you have just submitted/shown, (5) and sign your names/initials on the assignment-grading sheet provided by the instructor. Should something unexpected or emergent happen that prevents you from showing your solutions and signing your names/initials on the grading-sheet on time, this is what is called “documented/emergency situation” –please refer to Due Dates/Times below. Also note that the instructor will post the assignment grades regularly (usually within one week after the assignment’s due date) on Canvas and you are encouraged to check your assignment grades regularly.

- Given the lengthy steps of testing your solution code in the lab, please do submit your answers by deadline and be sure that you are very familiar with your solution—the Java code of *your own work!*
- If during the test in the lab you cannot answer the provided questions correctly or make necessary changes upon your submission for a varied problem (which is very similar to the assignment problem), your scores for that assignment will be severely affected (which can be as low as **0%**).
- Testing and grading will be done *after* the deadline. If the testing is done and the grading is posted and you would improve on your grades by submitting new work, the updated grades will be based on the new submission time (i.e., subject to late-submission penalty). So please start working on the projects early and have the instructor test your solutions well before the deadline and you may have chance of improving on the projects (based on the test feedback) and also on the grades.

Exams:

There will one midterm exam and one *comprehensive* final examination. Please refer to Final Grade above for the grading weights of the midterm and final examinations.

Missed Tests:

Tests (exams) may not be made up except for *documented/emergency* situations. If a test must be made up, arrangements must be made with the instructor to take the test before it is discussed in class (usually within a week of the test being administered).

Due Dates/Time:

- Late submission of assessed coursework will result in penalties defined in the following:
 - **25 percentage** points will be deducted for being late, up to 24 hours.
 - **50 percentage** points will be deducted for being late, more than 24 hours and up to 48 hours.
 - **75 percentage** points will be deducted for being late, more than 48 and up to 72 hours.
 - **100 percentage** points will be deducted for being late more than 72 hours (i.e., a grade of **zero** will be given).
 - A grade of **zero** will be given for any assignments including projects which are submitted after the final examination time. That is: **no assignments (including semester project) will be accepted after the final examination.**
- Should there be an emergency that prevents you from completing/submitting your assignments/projects on time, you will need to send *an email request* for the extension on the coursework submission. The instructor will reply to this request email with a specific number of days for the extension period or a new deadline for the assignment and you will need to keep *this email as a record of the extension approval*. Sending only a request email does **not** guarantee the extension approval
- **Please double-check** your submissions (since your assignment submissions are usually graded after their deadlines): download your submitted programs and then compile/run the code.
- **Please sign on the assignment-grading sheet** once the instructor has checked/tested/graded your assignments/projects in the class/lab.

Study Groups:

While I strongly encourage study groups, I require that each student hand in his/her answers in her/his own words - if two answers are highly similar to each other, neither will receive credit.

When working on your programming projects, you may discuss with others the project topics, the algorithms and methodologies related to the project; but when you work on writing the code, this coding work should be 100% of your own work. **If two answers/written code segments come out exactly the same or highly similar, neither will receive credit and/or further actions will be taken** (such as reporting to the department and/or university). Given the nature of most of the projects, homework questions and writing assignments, it will be almost impossible for two people to come up with highly similar answers UNLESS they copy.

Academic Integrity:

Academic Integrity Policy and Regulations can be found in the University Catalog and on the University's website (http://catalog.salemstate.edu/content.php?catoid=13&navoid=1295#Academic_Integrity). The formal regulations are extensive and detailed - familiarize yourself with them if you have not previously done so. A concise summary of and direct quote from the regulations: "Materials (written or otherwise) submitted to fulfill academic requirements must represent a student's own efforts". *Submission of other's work as one's own without proper attribution is in direct violation of the University's Policy and will be dealt*

with according to the University's formal Procedures.

All students are expected to be familiar with the academic regulations, including those regarding Academic Integrity, for Salem State University as published in the college catalog. In addition, each student is responsible for completing all course requirements and for keeping up with all that goes on in the course (whether or not the student is present).

Salem State University is committed to providing equal access to the educational experience for all students in compliance with Section 504 of The Rehabilitation Act and The Americans with Disabilities Act and to providing all reasonable academic accommodations, aids and adjustments. Any student who has a documented disability requiring an accommodation, aid or adjustment should speak with the instructor immediately. Students with Disabilities who have not previously done so should provide documentation to and schedule an appointment with the Office for Students with Disabilities and obtain appropriate services

In the event of a University declared critical emergency, Salem State University reserves the right to alter this course plan. Students should refer to salemstate.edu for further information and updates. The course attendance policy stays in effect until there is a university declared critical emergency. In the event of an emergency, please refer to the alternative educational plans for this course located at Canvas (<https://elearning.salemstate.edu/>). Students should review the plans and gather all required materials before an emergency is declared.

Please remember that if, for any reason, you decide to drop this course, you **MUST** do so officially through the Registrar's office. The last day to withdraw from a course this semester is **April 12th**.

Note: This syllabus represents the intended structure of the course for the semester. If changes are necessary, students will be notified in writing and via all regular class communication mechanisms (class discussion, emails, and/or the course link at Canvas <https://elearning.salemstate.edu/>).
