

SYLLABUS

Fall, 2023

CSC 110 Software Design and Programming I

4.0 cr. DII

Prerequisites: High school algebra I & II, plus experience with a window-based operating system and the use of email and a word processor. Not available to students who have received credit for ITE 210.

ITE 210 Introduction to Programming

4.0 cr.

Prerequisites: ITE105.

Instructor: Beifang Yi
email: byi@salemstate.edu

Office: MH 208B
Hours: WF (1:30-4:00)

Phone: (978) 542-7246
Website: <http://weblab.salemstate.edu/~byi/>

Section	Time	Room	Final Exam
01	W & F 10:50am-12:05pm	MH 210	December 14, Thursday 11:00am-1:00pm MH 210
L21	W & F 12:15-1:30pm	MH 210	
Office Hours		1:30—4:00pm (Wednesday, Friday), MH208B	

Catalog description (CSC110):

This course introduces a set of fundamental design principles and problem-solving techniques for the development of computer algorithms and their implementation as programs. Problem solutions are developed with the help of an appropriate modeling language and then coded in an object-oriented programming language. (Consult the Computer Science Department for the languages and tools currently in use.) Topics such as problem specification, object-oriented analysis and design, standard data types, control structures, methods and parameter passing, and design for reuse are presented through a study of specific example problems and solutions. Style, documentation, solution robustness, and conformance with specifications are emphasized throughout. Three lecture hours and three hours of scheduled laboratory per week plus extensive programming work outside of class.

Prerequisites: High school algebra I & II, plus experience with a window-based operating system and the use of email and a word processor. Not available to students who have received credit for ITE 210.

Catalog description (ITE210):

This course introduces a set of fundamental programming concepts and problem-solving techniques for the development of computer programs using a high-level programming language. Topics such as problem specification, standard data types, control structures, methods, and design for reuse are presented through a study of specific example problems and solutions. Style, documentation, solution robustness, and conformance with specifications are emphasized throughout. Three lecture hours and three hours of scheduled laboratory per week.

Prerequisites: ITE105.

Course Goals:

The purpose of this course is to develop students' understanding of a coherent set of tools and techniques for creating computer solutions to simple problems in data manipulation. Upon completion of the course, a student should be able to do the following:

- CG1: analyze a problem statement for completeness and clarity;
- CG2: use the methodology of object-oriented design to develop class diagrams (data descriptions and methods) for a problem solution;
- CG3: convert this solution into source code in the designated high-level programming language in accordance with a well-defined set of style rules;
- CG4: debug and test the program;
- CG5: provide clear documentation for the result.

Course Objectives:

Upon successful completion of the course, a student will have:

- CO1: demonstrated knowledge of the syntax elements of an object-oriented programming language;
- CO2: gained experience in analyzing problem statements for completeness and consistency;
- CO3: practiced standard techniques of problem analysis;
- CO4: applied the fundamentals of object-oriented design methodology;
- CO5: learned and utilized simple techniques for validation and verification of programs;
- CO6: created full documentation for several completed projects.

Course Topics:

A detailed topics list and a general course bibliography can be found on the Computer Science Department website at <http://cs.salemstate.edu/courses/course-information-documents> and select “CSC 110 Software Design and Programming I” to access a PDF document or at <http://cs.salemstate.edu/courses/ite-course-information-documents> and select “ITE210 Introduction to Programming” to access a PDF document.

Text:

(Required) Java How to Program: Early Objects, 11th Edition, by Deitel & Deitel. Prentice-Hall, 2017 (ISBN: 978-0-13-474335-6).

Required Material:

(Required) Thumb (flash) drive, 64 GB minimum or online storage (for saving your projects and coursework) in addition to your personal computer/laptop.

Additional references:

- Course teaching materials: http://weblab.salemstate.edu/~byi/CSC201J_202J_Deitels/index.html
 - This website is password-protected and ask the instructor for the password (or log into Canvas for it).
- Course online system (Canvas): <https://elearning.salemstate.edu/>.
 - Access to this site via the username and password given/assigned by SSU.

Software:

(Required) Download the JDK (i.e., Java Development Kit) at <https://www.oracle.com/java/technologies/downloads/>. Download JDK17 or above and install it on your computer. You may use your preferred IDE for working on Java programming assignments, but the IDE is not required.

Lecture/Lab Attendance:

Class policy is that of the Registrar's office - see the University catalog for details. Lecture will start promptly at the scheduled time, so please make a serious effort to not be late and note that you are at all times responsible for materials and assignments discussed in class. We will use SSU's online course management system, Canvas (<https://elearning.salemstate.edu/>) to post all types of assignments (including different formats/types of tests), grades, and announcements regarding the course topics and progress. You will need to visit Canvas (with your SSU Navigator use-name and password) for the course activities. Canvas uses your **SSU-stored email** for the communication between you and the instructor and thus you **must use this email** address. Each student is responsible for completing all course requirements and for keeping up with all that goes on in the course (whether or not the student is present).

Class attendance is required. Lab exercises will be tested and graded in the lab hours and no late submissions are accepted. Some tests will be held in the lab hours or class hours.

Some of the class/lab hours will be used to review important course topics, to discuss and investigate Java implementation details that time may not permit to be fully presented in the texts (for design and implementation drills, for programming exercises) to assist with design and implementation problems that arise in project exercises, to discuss and review important topics/questions regarding the tests, and to check/examine/grade the exercises and homework.

Student-Instructor Communication:

If you have any questions regarding course material, and *in particular if you are having problems with a programming assignment*, the most effective way to get assistance is to *discuss with the instructor (either in the class, in the lab, or outside the classroom)*.

Please **note**: Canvas is used for submission of the assignments/labs/projects and for posting grades. If you ask questions through Canvas-grading-submission features, they usually do **not** go to the instructor directly. Please ask questions in the class/lab or send emails (you may send email via Canvas) to the instructor!

Lab Exercises:

Programming practices and exercises regarding Java programming topics covered in the lecture are initialed and in the lab hours and lab exercises are designed not only for help on the understanding of the course topics but also for the preparation of programming projects. Lab exercises must be completed, **tested and graded** (by the instructor) **during the lab hours**. Lab submissions to Canvas only (by the deadline) do *not* guarantee lab credits—you need to have them tested by the instructor in the lab hours by the deadline.

Lab will be used to discuss and investigate Java implementation details that time may not permit to be fully explored during the scheduled lecture period, for design and implementation drills, to assist with design and debugging problems that arise in longer lab / project exercises, and to check/examine/grade the exercises and homework.

Please note that lab exercises are different assignments from the programming projects and the credits earned from the programming projects do not count for your lab assignment grades.

Some tests will be held in the lab hours.

The following table provides the lab activities (subject to minor changes as we go through the coursework).

Week	Dates	Lab Activities
1	9/6—9/8	Downloading JDK Setting up Java programming environment on your computer
2	9/11—9/15	Testing sample Java/JDK setting (Ch1) Basic Java input/output functions (Ch2)
3	9/18—9/22	Java arithmetic operations, basic operators (Ch2)
4	9/25—9/29	Java instance variables, methods (Ch3)
5	10/2—10/6	Java instance classes/objects/constructors (Ch3)
6	10/9—10/13	Selection controls, nested controls (Ch4) Iteration controls (Ch4)
7	10/16—10/20	Assignment/increase/decrease operators (Ch4) More iteration controls (Ch5)
8	10/23—10/27	Switch/break/continue statements (Ch5) Logical operators (Ch5)
9	10/30—11/3	Methods (Ch6)
10	11/6—11/10	Arrays (Ch7)
11	11/13—11/17	Class/Objects case studies (Ch8)
12	11/20—11/24	Class/Objects (Ch8) GUI (Ch3, Ch4)
13	11/27—12/1	GUI (Ch5, Ch6, Ch7, Ch8)
14	12/4—12/8	More Class/Objects with basics on Inheritance (Ch9, Ch10)
15	12/14—12/122	More Class/Objects with basics on Inheritance (Ch9, Ch10)

Lab Grading Procedures:

1. Submit your solution (Java source code or a compressed/zipped folder/directory which contains all the source code programs) for the lab assignment to Canvas by the deadline;
2. Show/test your solution in the lab hours;
3. Have the instructor test your code in the lab hours;
4. Answer the questions provided by the instructor correctly during the testing.

Final Grade:

Final grade will be determined using the following grading weights:

attendance	5%
assignments (reading, writing)	5%
lab exercises	24%
programming projects	24%
mini-tests	22%
final examination	20%

Attendance is used in the final grade: please also note that we will have mini-tests scheduled in class/lab hours and that you are at all times responsible for all types of assignments and materials presented in class.

The following table shows how the course work is assessed against the course objectives:

	Exams/test Questions	Assignment Problems	Programming Projects	Lab Exercises
CO01	✓	✓	✓	✓
CO02	✓	✓	✓	✓
CO03	✓	✓	✓	✓
CO04	✓	✓	✓	✓
CO05	✓	✓	✓	✓
CO06			✓	

Tests (mini-tests and final examination):

There will be several mini-tests administered throughout the semester and one *comprehensive* final examination. Please refer to Final Grade above for the grading weights of these tests.

The mini-tests will be like closed-book written quizzes (with questions in the form of multiple-choice, true-false, fill-in-blank, and short-answer questions) and programming problems. The tests must be completed during the lab hours (or other designated time periods). These programming mini-tests will be much like lab exercises and/or programming projects on a smaller scale.

The final examination will be a comprehensive examination, i.e., covering all the topics given in the class with emphasis on assignments (reading/writing) and programming skills/algorithms.

Missed Tests:

Tests may not be made up except for *documented/emergency* situations. If a test must be made up, arrangements must be made with the instructor, usually within a week of the test being administered.

Due Dates/Time:

- Late submission of assessed coursework will result in penalties defined in the following:
 - **25 percentage** points will be deducted for being late, up to 24 hours.
 - **50 percentage** points will be deducted for being late, more than 24 hours and up to 48 hours.
 - **75 percentage** points will be deducted for being late, more than 48 and up to 72 hours.
 - **100 percentage** points will be deducted for being late more than 72 hours (i.e., a grade of **zero** will be given).
 - A grade of **zero** will be given for any assignments/labs/projects which are submitted after the final examination time. That is: **no assignments/labs/projects will be accepted after the final examination.**
- Should there be an emergency that prevents you from completing/submitting your assignments/projects on time, you will need to send *an email request* for the extension on the coursework submission. The instructor will reply to this request email with a specific number of days for the extension period or a new deadline for the assignment and you will need to keep *this email as a record of the extension approval*. Sending only a request email does **not** guarantee the extension approval.
- **Please double-check** your submissions (since your assignment submissions are usually graded after their deadlines): to guarantee your successful submissions, you would need to download your submissions and examine the downloaded materials; as for the projects, you would need to check the downloaded programs and then compile/run the code.

Study Groups:

While I strongly encourage study groups, I require that each student hand in his/her answers in her/his own words - if two answers are highly similar to each other, neither will receive credit.

When working on your programming projects, you may discuss with others the project topics, the algorithms and methodologies related to the project; but when you work on writing the code, this coding work should be 100% of your own work. **If two answers/written code segments come out exactly the same or highly similar, neither will receive credit and/or further actions will be taken** (such as reporting to the department and/or university).

Academic Integrity:

Academic Integrity Policy and Regulations can be found in the University Catalog and on the University's website (http://catalog.salemstate.edu/content.php?catoid=13&navoid=1295#Academic_Integrity). The formal regulations are extensive and detailed - familiarize yourself with them if you have not previously done so. A concise summary of and direct quote from the regulations: "Materials (written or otherwise) submitted to fulfill academic requirements must represent a student's own efforts". *Submission of other's work as one's own without proper attribution is in direct violation of the University's Policy* and will be dealt with according to the University's formal Procedures.

SSU Disability Statement:

Salem State University is committed to providing equal access to the educational experience for all students in compliance with Section 504 of The Rehabilitation Act and The Americans with Disabilities Act and to providing all reasonable academic accommodations, aids and adjustments. Any student who has a documented disability requiring an accommodation, aid or adjustment should speak with the instructor immediately. Students with Disabilities who have not previously done so should provide documentation to and schedule an appointment with Disability Services and obtain appropriate services.

Consideration for the Covid-19 Pandemic:

Students must comply with any University Health and Safety Protocols for the current academic term. Students should review the updated Covid-19 information found at <https://www.salemstate.edu/covid19>.

Critical Emergency Statement:

In the event of a university declared critical emergency, Salem State University reserves the right to alter this course plan. Students should refer to Salem State for further information and updates. The course attendance policy stays in effect until there is a university declared critical emergency. In the event of an emergency, please refer to the alternative educational plans for this course located at Canvas (<https://elearning.salemstate.edu/>). Students should review the plans and gather all required materials before an emergency is declared.

Please remember that if, for any reason, you decide to drop this course, you **MUST** do so officially through the Registrar's office. The last day to withdraw from a course this semester is **November 27th, Monday**.

Note: This syllabus represents the intended structure of the course for the semester. If changes are necessary, students will be notified in writing and via all regular class communication mechanisms (class discussion, emails, and/or the course link at Canvas <https://elearning.salemstate.edu/>).
