

**SYLLABUS**
**Spring, 2026**  
**4 cr.**
**CSC 260 Data Structures and Algorithms**
**Prerequisites: CSC105 and CSC115**
**Instructor:** Beifang Yi  
**email:** byi@salemstate.edu

**Office:** MH 208B  
**Hours:** WF (1:30-3:45)

**Phone:** (978) 542-7246  
**Website:** <http://weblab.salemstate.edu/~byi/>

Section	Time	Room	Final Exam	
<b>01</b>	W & F 10:50am-12:05pm	MH 210	<b>May 4, Monday, 11:00am-1:00pm</b> <b>MH 210</b>	
<b>L21</b>	W & F 12:15pm-1:30 pm	MH 210		
Office Hours		1:30—3:45pm (Wednesday, Friday), MH208B		
Communication Policy		I will reply to student emails within 24 hours.		

**Catalog description**

Basic data structures such as stacks, queues, linked lists, and trees are studied and applied to problems in data storage and manipulation. Applications include basic searching and sorting algorithms. Fundamental strategies for algorithm design are reviewed and extended. Design, analysis, implementation, and quality assurance techniques are discussed. Three lecture hours and three hours of scheduled laboratory per week, plus extensive programming work outside of class.

**Prerequisites:** CSC105 and CSC115.

**Goals**

The purpose of this course is to develop students' knowledge and appreciation of organization and retrieval techniques and to familiarize students with the basic concepts of order-of-magnitude analysis. The goals of this course are:

- CG01: to develop an appreciation for the process of data abstraction and its usefulness in software development;
- CG02: to develop the skills and knowledge necessary to perform design and basic analysis of algorithms;
- CG03: to present a selection of the most common data structures and their standard implementations and uses;
- CG04: to present a selection of the most common algorithms for searching and sorting.

**Objectives**

Upon successful completion of the course, student will have:

- CO01: applied data abstraction techniques;
- CO02: implemented several classic data structures "from scratch";
- CO03: demonstrated knowledge and use of ADTs available in one or more language libraries;
- CO04: recognized the factors required to perform algorithm design, analysis of algorithms and performed order-of-magnitude analysis;
- CO05: chosen, with justification, an appropriate structure to match the requirements of a given problem, implemented the structure if necessary, and used it in an appropriate way to solve the problem;
- CO06: utilized standard techniques for program validation;
- CO07: demonstrated the ability to use the UML modeling language;
- CO08: produced documentation for at least one major completed project, including formal class diagrams and rigorous test set specification and results;
- CO09: participated in at least one group project involving problem analysis and design specification and selection;
- CO10: demonstrated recognition of the need for future professional development through research into future trends in the areas of analysis of algorithms and application development and profiling.

**Course Topics**

A detailed topics list and a general course bibliography can be found on the Computer Science Department website at [Salem State Computer Science Department](#) (click on “Degrees & Courses”, choose “Computer Science Major”, Click on “Course Descriptions”, and then select “CSC 260 Data Structures and Algorithms” to access a PDF document.).

## Text

**(Required) Data Structures and Algorithms in Java**, 6<sup>th</sup> Edition, by Michael Goodrich, Roberto Tamassia, and Michael Goldwasser, Wiley, 2014 (ISBN: 978-1-118-77133-4).

## Course Materials & Software

Thumb (flash) drive, 64 GB minimum or online storage (for saving your projects and coursework) in addition to your personal computer/laptop (Windows, MacBook, or Linux machines).

Download the JDK (i.e., Java Development Kit) at <https://www.oracle.com/java/technologies/downloads/>. Get JDK 21 or above and install it on your computer. You may use your preferred IDE for working on Java programming assignments, but the IDE is *not* required.

You will need to use Microsoft Word or similar software packages to complete some assignments.

It is expected that you work on your laptop for the lab/coding exercises during the lab hours. If you need technical help regarding your computer configuration or setup issues including software installation, please contact Information Technology Service (ITS) (at <https://www.salemstate.edu/offices-and-services/information-technology-services>).

## Additional references

- Course website: <http://weblab.salemstate.edu/~byi/CSC260/index.html> .
  - This website is password-protected and ask the instructor of the password (or log into Canvas for it).
- Course online system (Canvas): <https://elearning.salemstate.edu/>.
  - Access to this site via the username and password given/assigned by SSU.
- *Java How to Program: Early Objects, 11<sup>th</sup> Edition, by Deitel & Deitel. Prentice-Hall, 2017*
- (And other references are listed in the web pages from the above linked websites).

## Class/Lab Attendance

Regular attendance and active engagement in both class and lab sessions are expected and are essential to successful course completion. Lab exercises are evaluated during scheduled lab periods, and quizzes, tests, and other assessments may be administered during class or lab hours. Attendance and engagement are also assessed through **In-Class Learning Activities** (see below).

Class and lab sessions are used for instruction, hands-on exercises, discussion of course topics and Java implementation details beyond the textbook, project support, and assessment activities. Sessions begin promptly at the scheduled time, and students are expected to arrive on time and remain engaged throughout.

All course materials, assignments, grades, and announcements are delivered through **Canvas** (<https://elearning.salemstate.edu/>). Students are responsible for accessing Canvas using their SSU credentials, monitoring course communications, and ensuring their SSU email address is current.

Students are responsible for completing all course requirements and keeping up with course content and announcements, regardless of attendance at class or lab sessions.

## Student-Instructor Communication

For the most effective assistance with course material, particularly programming assignments, please consult with the instructor during class, lab, or office hours.

While Canvas is used for assignment submission and grade posting, it is not the primary method for seeking academic support. To ensure timely responses, please direct questions to the instructor during class or lab or via email.

## Grading Policy & Course Assessments

Final grade will be determined using the following grading weights:

in-class learning activities	15%
reading/writing assignments	10%
lab exercises	20%
programming projects	20%
mini-tests (quizzes)	12%
final examination	23%

The final numeric grade will be converted into a letter grade according to the grading scale below, and this letter grade will be submitted as the official course grade.

Overall Final	Letter Grade
94-100	A
90-93	A-
87-89	B+
84-86	B
80-83	B-
77-79	C+
74-76	C
70-73	C-
67-69	D+
64-66	D
60-63	D-
0-59	F

The following table shows how the course work is assessed against the course objectives:

	Mini-tests/Exams	Assignments (labs, programming projects, and other exercises)
CO01	✓	✓
CO02	✓	✓
CO03	✓	✓
CO04	✓	✓
CO05	✓	✓
CO06		✓
CO07	✓	✓
CO08	✓	✓
CO09		✓
CO10		✓

### AI Policy and Coding Assignment Grading

Online sources and generative AI tools (such as ChatGPT) may be used in the study of course topics and concepts. The primary approach to learning programming involves reading the assigned text chosen from the textbook, focusing the class lectures, doing lab exercises, and completing the coding assignments following the examples provided in the class. Online sources and AI tools should be used **only as supplementary aids**.

**Simply using solutions (i.e., programs) found online or generated by AI tools as your submissions for coding assignments (labs, projects, and etc.) are considered plagiarism.**

Please also note that online “solutions”, particularly those generated by AI tools, may use “advanced programming techniques” that have **not** been covered in the course by the assignment deadline. Students are **only** allowed to use programming techniques that have been presented up to that point.

**For each programming project and some labs, students must:**

1. Submit program code to Canvas by the deadline.
2. Have the instructor test your code during lab hours.
3. Correctly answer the instructor's questions during the testing process.
4. Successfully modify your code to address a similar coding problem *within a couple of minutes on site* in the lab.

Due to the extensive testing process, timely submission of your solutions is crucial. Thoroughly understand your Java code. If you cannot adequately explain your code, make necessary modifications, and answer related questions during the in-lab testing, your project grade will be *significantly impacted, potentially resulting in a score of zero*.

## Lab Exercises

Lab exercises are designed not only to help you understand the course topics but also to prepare you for the (programming) projects. These lab exercises are designed not only to help you understand course topics but also to prepare you for programming projects. Lab exercises must be tested and graded by the instructor during lab hours. Simply submitting them to Canvas by the deadline does not guarantee lab credit—you must have them tested by the instructor during lab hours before the deadline.

Lab sessions will be used to discuss and explore Java implementation details that may not be fully covered during lectures. They will also be used for design and implementation drills, to assist with design and debugging issues that arise coding-related exercises, and to check, review, and grade exercises and homework.

Please note that lab exercises are separate from programming projects, and the credits earned from programming projects do not count towards your lab assignment grades.

*Some mini-tests (quizzes) and in-class learning activities will also be conducted during lab hours.*

The table below outlines the lab activities (subject to minor adjustments as we progress through the coursework).

Week	Dates	Contents (textbook chapters and others)
1	1/20—1/23	CSC115-Reviews Java Primer (Ch 1)
2	1/26—1/30	OOD (Ch2)
3	2/2—2/6	Fundamental Data Structures (Ch3)
4	2/9—2/13	Algorithm Analysis (Ch 4)
5	2/16—2/20	Recursion (Ch 5)
6	2/23—2/27	Stacks/Queues/Deques (Ch 6)
7	3/2—3/6	List & Iterator ADT (Ch 7)
8	3/9—3/13	Trees (Ch 8)
9	3/16—3/20	<b>Spring Recess</b>
10	3/23—3/27	Trees (Ch 8)
11	3/30—4/3	Priority Queues (Ch 9) Maps/Hash/Set (Ch 10)
12	4/6—4/10	Search Trees (Ch 11)
13	4/13—4/17	Sorting/Selection (Ch12)
14	4/20—4/24	Graph (Ch 14)
15	4/27—4/29	Graph (Ch 14)

## Lab Exercise Submission

For each lab exercise, a lab report must be submitted in **Word or PDF format**. The specific content of the report depends on the individual lab exercise; therefore, **read the lab description and requirements carefully**. In addition, every lab report must include the following:

- **A short descriptive paragraph** (approximately 50–150 words) explaining the purpose of the lab, what the lab is about, and how the problem was approached or solved;
- **One screenshot showing the computer system time** at the moment the lab was completed. This timestamp must be captured from the computer system used to complete the lab.

Most labs are **coding-related exercises**. For such labs, the following additional items are required:

- **Program execution screenshots** included within the same report, showing the execution (running) of the program(s) (e.g., Java programs). The execution may involve multiple inputs and outputs; screenshots do not need to capture all of them but

should include representative portions. Screenshots should focus on testing results (inputs/outputs) rather than source code. Each screenshot must include **one explanatory sentence** describing what it shows;

- **Java program files** (i.e., .java files): upload **all** Java source files separately. Do **not** copy or paste source code into the report document;
- **Test data files**, if applicable.

Do **not** zip or compress any submission files.

Ensure that all screenshots are clear, legible, and easy to read. Avoid capturing entire monitor screens or full IDE windows; instead, focus only on the required content. **Illegible or unclear screenshots may result in grading penalties or a score of zero for the lab.**

## Lab Grading Procedures

1. **Submit your solution** (Java source code and lab report) for the lab assignment to Canvas by the deadline;
2. **An initial grade** will be assigned based on the submitted materials;
3. **Demonstrate and test your solution** during the scheduled lab sessions;
4. **Allow the instructor to test your code** during lab hours;
5. **Respond accurately to instructor questions** during the testing process, which may include explaining your implementation and making required code updates or modifications based on instructor feedback;
6. **The initial grade may be adjusted**—increased, unchanged, or decreased (including a score of zero)—based on the results of on-site testing and the quality of your responses.

## Tests (mini-tests/quizzes and final examination)

Mini-tests (quizzes) will be administered throughout the semester, along with a comprehensive final exam. The weight of each assessment in determining your final grade is outlined in the grading policies above.

Mini-tests will consist of questions in multiple-choice, true/false, fill-in-the-blank, and short-answer formats, as well as programming problems. These tests must be completed during designated class/lab periods or by the deadlines online at Canvas. Programming mini-tests will resemble smaller-scale versions of lab exercises and projects.

The final exam will be a comprehensive evaluation of all course material.

## Makeup Examinations

Make-up exams/mini-tests are generally *not permitted unless* there is documented proof of an emergency. If you need to reschedule a test, you must arrange this with the instructor within one week of the original test date. The final exam make-up will be done in the university designated Make-up Exam Period.

## Policy on Late Work

- Late submission of assessed assignments (including labs and projects) will incur the following penalties:
  - A **20%** deduction if submitted within 24 hours after the deadline.
  - A **40%** deduction if submitted more than 24 hours and up to 48 hours late.
  - A **60%** deduction if submitted more than 48 hours and up to 72 hours late.
  - An **80%** deduction if submitted more than 72 hours and up to 96 hours late.
  - A **100%** deduction (grade of zero) if submitted more than 96 hours late.
  - In addition, **no** assignments (including labs and projects) will be accepted *after the final examination*. Any work submitted after that time will receive a grade of **zero**.
- In the event of an emergency that prevents you from completing or submitting your assignments/labs/projects on time, you must send an *email* request for an extension. The instructor will respond with either the number of days granted for the extension or a new deadline. You should keep this email as proof of the extension approval. Please note that sending a request email does **not** automatically guarantee an extension.
- Please **double-check your submissions**, as they are typically graded after the deadlines. To ensure successful and correct submissions, download and review your submitted materials. For programming projects, download the programs and verify that the code compiles and runs correctly.

## Study Groups

While I strongly encourage study groups, each student must submit their answers in their own words or solutions. If two submissions are highly similar, neither will receive credit.

When working on your programming projects, you may discuss project topics, algorithms, and methodologies with others. However, the coding must be entirely your own work. If two code submissions are identical or very similar, neither will receive credit, and further action may be taken, such as reporting the incident to the department or university.

Collaboration is encouraged for discussing project topics, algorithms, and methodologies. However, all code must be your original work. Identical or highly similar code submissions will result in **zero** credit for both parties and may lead to further disciplinary action.

## **Academic Integrity**

Salem State University assumes that all students come to the University with serious educational intent and expects them to be mature, responsible individuals who will exhibit high standards of honesty and personal conduct in their academic life. All members of the Salem State University academic community have a responsibility to ensure that scholastic honesty and academic integrity are safeguarded and maintained. Cheating and plagiarism are unfair, demoralizing, and demeaning to all of us. Cheating, plagiarism, and collusion in dishonest activities are serious acts that erode the University's educational role and cheapen and diminish the learning experience not only for the perpetrators, but also for the entire community. It is expected that Salem State University students will understand and subscribe to the ideal of academic integrity and that they will be willing to bear individual responsibility for their work. Materials (written or otherwise) submitted to fulfill academic requirements must represent a student's own efforts.

## **Equal Access Statement**

Salem State University celebrates and welcomes diverse learners of all types. Salem State University is committed to providing equal access to the educational experience for all students and to providing all reasonable academic accommodations, aids and adjustments.

Students who qualify for accommodations, aids or adjustments who have not previously done so should provide documentation to and schedule an appointment with the [Center for Accessible Academic Resources](#) and obtain appropriate services at [caar@salemstate.edu](mailto:caar@salemstate.edu). Any student who has a documented need for accommodations, aids or adjustments should share their accommodation letter with their instructors. We encourage students to communicate with their instructors as early in the semester as possible.

Salem State University complies with Section 504 of The Rehabilitation Act and The Americans with Disabilities Act.

## **University Emergency Statement**

In the event of a university declared critical emergency, Salem State University reserves the right to alter this course plan. Students should refer to Salem State for further information and updates. The course attendance policy stays in effect until there is a university declared critical emergency. In the event of an emergency, please refer to the alternative educational plans for this course located at Canvas (<https://elearning.salemstate.edu/>). Students should review the plans and gather all required materials before an emergency is declared.

## **Coursework Expectations and Schedule**

Students enrolled in this four-credit course should plan to spend approximately three hours per week attending class and three hours in lab attendance or practice. Additionally, **a minimum of eight hours per week outside of class and lab** is required for course-related work, beyond the six hours spent in class and lab sessions.

Students are responsible for adhering to Salem State University's academic regulations, including those pertaining to academic integrity, as outlined in the college catalog. It is essential that students complete all course requirements and keep up with course content, even in absences. The following table outlines the course schedule (subject to some adjustments or minor changes as the class goes on), including the topics covered each week of the semester and the final examination time. Detailed course requirements and advancements can be found at Canvas (<https://elearning.salemstate.edu/>).

Please remember that if, for any reason, you decide to drop this course, you MUST do so officially through the Registrar's office. The last day to withdraw from a course this semester is **April 10<sup>th</sup>**.

**Note:** This syllabus represents the intended structure of the course for the semester. If changes are necessary, students will be notified in writing and via all regular class communication mechanisms (class discussion, emails, and/or the course link at Canvas <https://elearning.salemstate.edu/>).
